Education

ABV-Indian Institute of Information Technology, Gwalior

July 2021 – July 2026

Integrated B.Tech + MBA in Information Technology

CGPA: 7.71/10

Experience

MSCI Inc. | Technical Program Management Intern

January 2026 – Present

- Designed and automated an end-to-end **data reconciliation workflow**, integrating enterprise data sources and generating structured reports, reducing the complete reconciliation cycle to **under 20 minutes**.
- Built automation solutions to detect, analyze, and surface data inconsistencies, streamlining validation workflows and improving the accuracy of entitlement data.
- Collaborated with cross-functional engineering teams to investigate reconciliation issues, communicate findings, and support the implementation of automation-driven process improvements.

Projects

AI-Powered Portfolio Website  | React, TypeScript, Tailwind CSS, Gemini API, Vercel Serverless Functions

- Developed an **AI-powered portfolio website** featuring a **Gemini-integrated serverless chatbot** that answers queries using a curated portfolio knowledge base and provides contact information for unsupported requests.

ChatRoom  | Java, Spring Boot, Spring Security, WebSockets, MongoDB, MySQL, Redis, Docker, Nginx

- Developed a **microservices-based real-time chat application** using **Spring Boot**, separating authentication and messaging services to improve modularity and scalability.
- Implemented secure **JWT-based authentication** with **Spring Security**, persisted user data in **MySQL** and chat messages in **MongoDB**, and integrated **Redis** for chaching and real-time messaging support.
- Built bidirectional communication using **WebSockets (STOMP)** and containerized the application with **Docker Compose**, configuring **Nginx** as a reverse proxy for API routing and WebSocket connections.

Avenyx - E-Commerce Microservices Platform  | TypeScript, Node.js, Kafka, MongoDB, Redis, Docker, React

- Built an e-commerce backend using a **modular monolith** (Identity, Product) with **4 independent microservices** (Basket, Payment, Order, Invoice), enabling modular development and scalability.
- Implemented asynchronous communication using **Kafka** event streaming and **Socket.io** notifications, where payment events automatically trigger order creation and invoice generation.
- Integrated **Redis** for session and basket caching, **MongoDB** for persistence, **Elasticsearch** for product search, secured APIs using JWT authentication, and containerized the complete application using **Docker Compose**.

Scrapper- Chrome Extension  | JavaScript, Java

In Progress

- Built a Chrome Extension to scrap jobs from a specific website
- Integrating AI and a proper backend to automate the process and store the data without any duplication

Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, KQL

Backend & Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, WebSockets, Microservices, JWT Authentication, Node.js, FastAPI

Databases & Messaging: MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch, Kafka

DevOps & Tools: Docker, Kubernetes, Nginx, Git, Maven, Postman, GeminiAPI, Jira

Achievements

- * Top **6.3% globally** in LeetCode Weekly Contest 458.
- * Achieved **Global Rank 395** in CodeChef Starters 154 (Div. 3) among 12,000+ participants.
- * Secured **2nd Place** in the MSCI Internal AI Workshop, Quiz and Hands-on AI Competition.

Leadership

- * Led a 6-member team to the **Regional Round of Smart India Hackathon 2023**, coordinating task allocation and mentor communication.
- * Managed the AI/ML track at the IATMSI'22 International Conference, coordinating event execution and community outreach.
